Topic and Video

I chose to study and teach about: **Marker, Backdrop, and Selection**. I have uploaded my video to **YouTube** and verified in a private browsing window that anyone with the link can view it without needing to request access or sign in.

You may view the video online at: <https://youtu.be/JKNUJMY9eHc>.

Summary

In my video, I went over `::marker`, `::backdrop`, and `::selection` in CSS. I showed how `::marker` can change the bullets or numbers in a list, `::backdrop` can change the background behind a dialog, and `::selection` can change what text looks like when you highlight it. I also made a simple demo with the help of ChatGPT so I could show how each one works. One thing I learned is that some of these only let you use certain CSS properties. If I did the video again, I would probably show a few more examples of what works and what doesn't. I hope my video explains it well enough that my peers can understand these new concepts cause they are pretty cool! :)
