Design Review Report

Brynlee Bingham October 10, 2026

Teaching Videos

List each teaching video you watched. For each one, write a real takeaway. What concept clicked for you? What surprised you or challenged an assumption you had? What impressed you about how your teammate demonstrated something? Take this seriously. Your teammates put real effort into these videos to teach you something you did not study yourself.

Video

I watched **Angelique**'s video on **Attribute Selectors**.

Takeaway

I watched Angelique's first teaching video. One thing that I liked was getting to see another way of working with CSS. It helped me think more about how the different CSS features can make styling easier and keep the code more organized. I think seeing examples is really helpful because it makes it easier to understand how I could use these things in my own projects.

Video

I watched **Angelique**'s video on **@custom-media**.

Takeaway

Okay so I also watched Angelique's video on @custom media. I thought it was cool that you can give media queries their own names instead of having to write the same breakpoints over and over. I hadn't really thought about how helpful that could be when working on a bigger project or website. It seems like a nice way to keep responsive CSS more organized and make it easier to update later down the road.

Video

I watched **JC**'s video on **@scope**.

Takeaway

It was good to watch JS's video about @scope. I learned that you can limit where certain CSS styles apply instead of having them affect other parts of the website. I thought that was really interesting because sometimes CSS can get confusing when styles start affecting elements you didn't mean to change. While I watched his video I could definitely see how @scope could help keep things organized especially when working on different components. I also wasn't able to watch JS's second teaching video because it was making me request access and it was kinda messed up.

Code Reviews

Review at least two teammates' portfolio repositories. Look at their actual code for Choose Topic pages you did not build yourself. Each design review you should choose different teammates to review so that over the course of the semester you cycle through everyone on your team.

Review

I reviewed **Angelique**'s code for their **Layered Componets** page.

What You Found

I was able to review Angelique's CSS files and thought she did a really good job organizing everything! I liked how she separated her CSS into different files for things like buttons, cards, and layouts. One thing that stood out to me was how she used variables for spacing, colors, and borders instead of repeating the same values everywhere. I also noticed that she used CSS nesting for her buttons, including hover, focus, and disabled states. I thought that was really cool because it keeps everything together and makes the code easier to read. I didn't notice any obvious problems in the files I looked at but I thought her organization was really good and gave me some ideas for my own portfolio. She did so good! :)

Check In

How Are You Doing?

I feel like I'm doing pretty good in this class so far! I've learned a lot of new things about CSS that I didn't even know existed before. It is kind of cool! Some of the concepts have been a little confusing at first especially when it comes to organizing CSS with layers and understanding how everything works together. Ince I actually started coding and trying things out it started to make a lot more sense. I really like getting to see how my teammates approach things differently because it gives me new ideas for my own projects. I feel like I'm learning a lot and getting more comfortable with CSS as times goes on.
