Teaching Video Report

Brynlee Bingham 9 October 2026

Topic and Video

I chose to study and teach about: **Lightning CSS**. I have uploaded my video to **YouTube** and verified in a private browsing window that anyone with the link can view it without needing to request access or sign in.

You may view the video online at: https://youtu.be/bnXmyZACr-4.

Summary

Okay so for my teaching video I talked about Lightning CSS and how it helps organize and optimize your CSS files. I showed how to set it up using Node.js and npm, how to use the build command and what the different flags like bundle, minify and targets do. I also showed the difference between my original CSS files and the generated CSS file. One of my favorite parts was showing watch mode and how it automatically rebuilds the CSS when I make changes. I really like this aspect of it because it is so handy! Something I learned is that Lightning CSS makes it easier to keep my code organized without having a bunch of separate CSS files loading on my website. I also learned how it compares to PostCSS and why it can be a simpler option. If I recorded my video again, I would probably spend a little more time showing what happens when you remove the different flags so people could actually see the differences instead of just hearing me explain them. I actually really like Lightning CSS and I thought it was a super cool choose topic to cover for this week. :)
