Topic and Video

I chose to study and teach about: **Advanced Gradients and @property**. I have uploaded my video to **YouTube** and verified in a private browsing window that anyone with the link can view it without needing to request access or sign in.

You may view the video online at: https://youtu.be/iwvPBVpGpjk.

Summary

Alrighty so in my video I went over advanced gradients and how we can use them to make different patterns and animations with css. Chat and I made a little pink gradient playground to help show how everything works. I demonstrated how to make stripes, dots and grids using linear and radial gradients. I also showed how changing the background-size can make the patterns bigger or smaller without having to change the actual gradient itself. I also talked about repeating gradients and how they auto repeat the colors based on the stops we give it. Then I went over @property and how it lets us animate custom css properties smoothly. I kind of showed how the three parts of @property work and what happens when you use the wrong initial value. I also talked about how you can change the animation speed to either be faster or slower. One thing I thought was really interesting was how much you can actually do with gradients without needing any pics or JS. I also learned how important it is to include prefers-reduced-motion so people can turn off animations if they don't want them. I thought this was a pretty fun topic to learn about and I probably will use some of these fun features in the future! :)
