Visual Effects Report

Brynlee Bingham October 20, 2026

Site Details

My live visual effects page is at https://brynbing03.github.io/wdd331/unit-3/visual-effects/index.html and the source code is at https://github.com/Brynbing03/wdd331.git.

Reflection

Design Decisions

Okay two of the visual effects I added were the hover effect on my cards and the frosted glass effect. For the cards I added shadows and made them move up a little when the user on the site hovered over the card. I wanted the page to feel a little more interactive and fun without being too much if you know what I mean. For the frosted glass section of the site I added a liar so that you could still see the background image but also read the text really easy. I played around with the blur and transparency until I liked how it looked. I wanted it to look clean and nice without making the page too busy and chaotic.

Dark Mode Challenges

I think that the hardest part was getting the little icons near the bottom of the page to show up in dark mode. They looked great in light mode but when I switched to dark mode I couldn't even see them because they were like a black or a super dark brown. They we just kind of invisible and blended into the background so I had to fix that. I fixed it by using invert( ) in my css to make the icons white in dark mode. After I did that you could see the icons in both light and dark mode. Depending on what mode you were on is if they showed up white or black and it worked out!

Restraint

I thought about possibly adding more animations to my page but I vetoed it. I thought it would be better to keep it pretty simple. I didn't want everything moving around because I felt like that would be too distracting and overwhelming. I know if there is too much going on, on a website when I go to it, it makes me not want to be on it anymore and I didn't want that. I learned that the visual effects ca make a website more fun and interesting but if you add too many it can make it look way to busy. I think that often times it is better to keep things more simple because I think it makes the page look better. :)
